## About This Content

With this module you will unlock the full and unlimited support for "F1 2018" (by Codemasters) in *Sim Racing Telemetry*.

To use this module you must own a copy of "F1 2018" on a supported platform (PC, PS4, Xbox One) and follow the integrated instructions to record data.

Note: this product is not made by, or affiliated with, the developer and/or owners of the game.

On game updates the communication protocol could change, in this case we'll publish an update in few days. For any problem, please write at [support@simracingtelemetry.com](mailto:support@simracingtelemetry.com).

To record data, both the computer running SRT and the PC/console running the game must be connected to the same network. The game and SRT can run on the same computer. SRT records only **complete timed laps**. Follow the integrated instructions (Help button in the Recording view) to configure the game and properly record telemetry data.
